**Proposed Permit Date:** 06/05/2014

**District Engineer:** Chris Gerstle

**Permit No:** 143-97-TV(R1)

**Plant ID:** 187

**SIC Code:** 3399

**NAICS:** 331314

**AFS:** 00187

**Introduction:**

This permit will be issued pursuant to: (1) District Regulation 2.16, (2) Title 40 of the Code of Federal Regulations Part 70, and (3) Title V of the Clean Air Act Amendments of 1990.

Its purpose is to identify and consolidate existing District and Federal air requirements and to provide methods of determining continued compliance with these requirements.

Jefferson County is classified as an attainment area for lead (Pb), nitrogen dioxide (NO<sub>2</sub>), carbon monoxide (CO), 1 hr and 8 hr ozone (O<sub>3</sub>), and particulate matter less than 10 microns (PM<sub>10</sub>); and is a non-attainment area for particulate matter less than 2.5 microns (PM<sub>2.5</sub>) and partial non-attainment for sulfur dioxide (SO<sub>2</sub>).

**I. Source Information**

1. **Product/Process Description:** The source produces aluminum powder and paste.
2. **Site Determination:** There are no other facilities that are contiguous or adjacent and under common control.
3. **Emission Unit Summary:**

Unit	Name
U-1	Boiler Room
U-2	Hot Air Furnace
U-3	Hot Air Direct Convey and Air Slide System
U-4	Hot Air Bin Fill
U-6	Classifiers
U-7	Blending/Repack (Insignificant Activity emission unit)
U-8	Rescreens (Insignificant Activity emission unit)
U-13	Paste (Insignificant Activity emission unit)
U-14	Aluminum Paste Dryers
U-15	Mixers (Insignificant Activity emission unit)
U-16	AST Farm (Insignificant Activity emission unit)
U-17	Stills
U-18	Parts Washers (Insignificant Activity emission unit)
U-22	New Paste (Insignificant Activity emission unit)
U-23	Solvent Exchangers (Insignificant Activity emission unit)
U-24	Mills 13/14 (Insignificant Activity emission unit)
U-25	Zinc Mill (Insignificant Activity emission unit)
U-27	Solvent Wash (Insignificant Activity emission unit)
U-28	Cooling Tower
IE-EG	Emergency Generator(s) (Insignificant Activity emission unit)

**4. Permit Revisions:**

Revision No.	Date or Reissuance	Public Notice Date	Type	Emission Unit	Description
Initial	1/29/2001	8/28/2001	Initial	Entire Permit	Initial Issuance
R1	7/25/2014	6/5/2014	Renewal	Entire Permit	Permit Renewal, Incorporate STAR TAC requirements; Incorporate Construction Permits; removed equipment taken out of service

5. **Fugitive Sources:** Fugitive emissions of dust from any part of the plant are subject to Regulation 1.14, *Control of Fugitive Particulate Emissions*.

RMP Reporting Center  
 P.O. Box 3346  
 Merrifield, VA 22116-3346

- 4. 40 CFR Part 64 Applicability Determination:** The source is major for PM and a control device is needed to achieve compliance with District Regulation 7.08 for Emission Points E-3, E-8, E-13, and E-15. In accordance with 40 CFR 64, Compliance Assurance Monitoring for Major Stationary Sources, the source was required to propose a CAM plan for PM, based on current process and control device requirements and practices. The CAM plan was received by the District on January 15, 2013.

**5. Basis of Regulation Applicability**

**a. Plant-wide**

Eckart is a major source for PM/PM<sub>10</sub> and VOC. Regulation 2.16-*Title V Operating Permits* establishes requirements for major sources.

Regulations 5.00, 5.01, 5.20, 5.21, 5.22 and 5.23 (STAR Program) establishes requirements for environmental acceptability of toxic air contaminants (TACs) and the requirement to comply with all applicable emission standards.

Eckart America Corporation submitted their STAR Environmental Acceptability Determination to the District on **March 31, 2009, July 27, 2012, February 6, 2014, and May 16, 2014**. Per the most recent EA demonstration, the AERMOD 8-hour MAC for aluminum was 55.04022 µg/m<sup>3</sup>. Using APCD's equation 4 (Regulation 5.21, section 2.2), the resulting HQ is 1.10. The MAC is located on industrial property. The industrial HQ is below the EA<sub>nc</sub> of 3.0. An AERMOD run was also completed with just the non-industrial receptor points. The residential 8-hour MAC for aluminum was 37.00945 µg/m<sup>3</sup>. The residential HQ is 0.74, which is below the EA<sub>nc</sub> of 1.0. Eckart is in compliance with the STAR EAGs.

The TAC emissions from an insignificant activity (as defined in Regulation 2.16) are considered to be "de minimis emissions" by the District. (Regulation 5.21, section 2.3)

The TAC emissions from the combustion of natural gas are considered to be "de minimis emissions" by the District. This includes all of the emissions from a process or process equipment for which the only emissions are the products of combustion of natural gas, such as from a natural gas-fired boiler or turbine, but does not include the other emissions from a process or process equipment that are not the products of the combustion of natural gas. (Regulation 5.21, section 2.7)

Regulation 2.16, sections 4.1.9.1 and 4.1.9.2 requires sufficient monitoring and record keeping to assure ongoing compliance with the terms and conditions of the permit. The owner or operator shall maintain all the required records for a minimum of 5 years and make the records readily available to the District upon request.

Regulation 2.16, section 4.3.5, requires stationary sources for which a Title V is issued shall submit an annual compliance certification by April 15. In addition, as required by Regulation 2.16, section 4.1.9.3, the source shall submit compliance reports at least every six months to show compliance with the permit. Compliance reports and compliance certifications shall be signed by a responsible official and shall include a certification statement per Regulation 2.16, section 3.5.11.

Regulation 2.16, section 4.3.1 establishes testing requirements to assure compliance with the terms and conditions of the permit. Thus, an EPA Reference Method performance test shall be performed every 10 years to determine the emission rate and control efficiency.

c. **Basis for Applicability**

<b>Regulation</b>	<b>Basis for Applicability</b>
1.05	Establishes daily record keeping requirements for sources emitting 100 tons per year or more of VOC and all Control Technique Guidance (CTG) sources to demonstrate compliance with applicable portions of Regulation 6 and 7.
2.03	Establishes requirements for Permits to Construct and Operate
2.05	Establishes requirements for the prevention of deterioration of air quality in regions of the country that currently meet the NAAQS.
2.16	Title V source
5.00	Establishes definitions of terms used in the Strategic Toxic Air Reduction Program.
5.01	Establishes general provisions for process equipment from which a toxic air contaminant is or may be emitted.
5.02	Adoption and Incorporation by Reference of National Emission Standards for Hazardous Air Pollutants
5.20	Establishes the methodology for determining the benchmark ambient concentration of a toxic air contaminant.
5.21	Establishes the criteria for determining the environmental acceptability of emissions of toxic air contaminants.
5.22	Establishes the procedures for determining the maximum ambient concentration of a toxic air contaminant.
5.23	Establishes categories of toxic air contaminants.
6.09	Applies to each process operation that is not otherwise regulated by any other portion of Regulation 6 and was in existence or had a construction permit issued by the District by September 1, 1976.
6.18	Applies to cold cleaners.
6.24	Establishes VOC standards for affected facilities constructed before June 13, 1979.
7.06	Applies to each indirect heat exchanger having input capacity of more than one million BTU per hour commenced after September 1, 1976.

Regulation	Basis for Applicability
7.08	Equipment installed after September 1, 1976 and subject to the PM emission standard.
7.12	Storage tanks with a capacity greater than 250 gallons constructed after April 19, 1972
7.25	Establishes VOC standards for affected facility constructed after June 13, 1979 for VOC.
40 CFR 60 Subpart III	Applies to stationary CI internal combustion engines that commences construction after July 11, 2005.
40 CFR 63 Subpart ZZZZ	Applies to existing, new, and reconstructed stationary engines. The generators are stationary RICE located at an area source of HAP emissions, therefore 40 CFR 63 Subpart ZZZZ applies.
40 CFR 64	Applies to each pollutant specific emission unit that is subject to an emission limitation or standard; uses a control device to achieve compliance; and has pre-control emissions that exceed or are equivalent to the major source threshold. CAM applies because the Atomization Furnace, Buhler A Conveyor Pod, and Tote/Drum Fill Stations are subject to emission limitations, use control devices to achieve compliance and have pre-control emissions that exceed the major source threshold.
40 CFR 80 Subpart I	Regulation 40 CFR 60, Subpart III refers to regulations 40 CFR 80, Subpart I, 40 CFR 89, Subpart B, and 40 CFR 1039, Subpart B
40 CFR 89 Subpart B	Regulation 40 CFR 60, Subpart III refers to regulations 40 CFR 80, Subpart I, 40 CFR 89, Subpart B, and 40 CFR 1039, Subpart B
40 CFR 1039 Subpart B	Regulation 40 CFR 60, Subpart III refers to regulations 40 CFR 80, Subpart I, 40 CFR 89, Subpart B, and 40 CFR 1039, Subpart B

i. **Equipment**

Emission Point	Description	Applicable Regulations
E-1	Boiler #5, natural gas fired only	STAR, 7.06
E-2	Boiler #4, natural gas fired only	
E-138	Space Heater	STAR

ii. **Standards/Operating Limits**

1) **PM**

In accordance with Regulation 7.06, section 4.1.4, PM emissions are limited to 0.342 pounds per million BTU actual total heat input for Emission Points E-1 and E-2.

$$E = 1.919 \times (25.066)^{-0.535} = 0.342 \text{ lb/mmBTU}$$

2) **Opacity**

The boilers are subject to the opacity standards in accordance with Regulation 7.06, section 4.2.

3) **SO<sub>2</sub>**

In accordance with Regulation 7.06, section 5.1.1, SO<sub>2</sub> emissions are limited to 1.0 pounds per million BTU actual total heat input for Emission Point Points E-1 and E-2 because the total heat input capacity is less than 145 million BTU per hour.

4) **TAC**

Per Regulations 5.00 and 5.21, TAC emissions must not exceed environmentally acceptable levels.

iii. **Monitoring, Record Keeping and Reporting**

**SO<sub>2</sub>/PM/Opacity**

- (a) A one-time PM and SO<sub>2</sub> compliance demonstration has been performed for the boilers, using AP-42 emission factors and combusting natural gas, and the emission standards cannot be exceeded. Therefore, there are no monitoring, record keeping, and reporting requirements for these boilers with respect to PM and SO<sub>2</sub> emission limits.
- (b) The District has determined that using a natural gas fired boiler will inherently meet the 20% opacity standard. Therefore, the company is not required to perform periodic monitoring to demonstrate compliance with the opacity standard.

- (b) Regulation 7.08, section 3.1.1 establishes opacity standards.

2) **PM**

- (a) Regulation 6.28, section 3.2 establishes a PM standard.
- (b) In accordance with Regulation 7.08, Table 1, PM standard for Emission Points E-4 E-6, E-5a and E-7a is:  
 $E = 3.59 \times (0.75)^{0.62} = 3.00 \text{ lb/hr}$   
 (The source submitted a one-time demonstration on February 21, 2014 that shows the potential uncontrolled PM emissions cannot exceed the PM emission standard.)

3) **TAC**

Per Regulations 5.00 and 5.21, TAC emissions must not exceed environmentally acceptable levels.

ii. **Standards/Operating Limits**

1) **Opacity**

Regulation 6.09, section 3.1 and Regulation 7.08, section 3.1.1 establishes opacity standards.

2) **PM**

(a) In accordance with Regulation 6.09, Table 1, PM standard for Emission Point E-141 is:

$$E = 4.10 \times (1.35)^{0.67} = 5.01 \text{ lb/hr}$$

(The source submitted a one-time demonstration on February 21, 2014 that shows the potential uncontrolled PM emissions cannot exceed the PM emission standard.)

(b) In accordance with Regulation 7.08, Table 1, PM standard for Emission Point E-229 is:

$$E = 3.59 \times (1.75)^{0.62} = 8.05 \text{ lb/hr}$$

(The source submitted a one-time demonstration on February 21, 2014 that shows the potential uncontrolled PM emissions cannot exceed the PM emission standard.)

(c) In accordance with Regulation 7.08, Table 1, PM standard for Emission Point E-9 is:

$$E = 3.59 \times (1.5)^{0.62} = 4.62 \text{ lb/hr,}$$

(d) In accordance with Regulation 7.08, Table 1, PM standard for Emission Point E-229 is:

$$E = 3.59 \times (1.35)^{0.62} = 4.32 \text{ lb/hr}$$

(The source submitted a one-time demonstration on February 21, 2014 that shows the potential uncontrolled PM emissions cannot exceed the PM emission standard.)

(e) Per construction permit 84-09-C, PM standard for Emission Point E-8a is 4.62 lb/hr.

(f) In order to avoid PSD/Nonattainment NSR the permit contains a PM emission limit of <25 tons per 12 consecutive month period for emission points E-8a and E-9 combined in accordance with Regulation 2.05.

3) **TAC**

Per Regulations 5.00 and 5.21, TAC emissions must not exceed environmentally acceptable levels.

(The source submitted a one-time demonstration on February 21, 2014 that shows the potential VOC emissions cannot exceed the emission standards from Regulation 6.24 for Class II and Class III solvents. Therefore, there are no monitoring, recordkeeping, or reporting requirements for these emission points.)

- (b) Per Regulation 7.25 (BACT) and construction permit 36563-13-C, Effective 4/26/2013, VOC emissions are limited to 3.29 tons per 12 consecutive month period for Emission Point E-71. (The source submitted a one-time demonstration on February 21, 2014 that shows the potential VOC emissions cannot exceed the emission standards from Regulation 7.25. Therefore, there are no monitoring, recordkeeping, or reporting requirements for these emission points.)
- (c) Per Regulation 2.05 and construction permit 36563-13-C, Effective 4/26/2013, VOC emissions are limited to 40 tons per 12 consecutive month period for Emission Points E-231 (U-13); E-129, E-130, E-131, E-132, E-134, E-136, E-137 (U-15); E-111, E-112, E-113, E-114, E-115, E-116, E-117, E-118, E-178, E-119, E-120, E-121, E-270, E-179 a-h, E-180, E-181 (U-22); E-123, E-125, E-126, and E-127, E-252, E-253 (U-23). (The potential uncontrolled VOC emissions are over 25 tons for these mission points. This emission limit ensures PSD avoidance.)
- (d) Per Regulation 7.25 (BACT) and construction permit 36563-13-C, Effective 4/26/2013, VOC emissions are limited to 40 tons per 12 consecutive month period for Emission Points E-231 (U-13); E-129, E-130, E-131, E-132, E-134, E-136, E-137 (U-15); E-111, E-112, E-113, E-114, E-115, E-116, E-117, E-118, E-178, E-119, E-120, E-121, E-270, E-179 a-h, E-180, E-181 (U-22); E-123, E-125, E-126, and E-127, E-252, E-253 (U-23). (The potential uncontrolled VOC emissions are over 25 tons for these mission points.)
- (e) Per Regulation 7.25 and construction permit 36563-13-C, Effective 4/26/2013, VOC emissions from Emission Points E-61a and E-61b (U-13), E-232 (U-14), E-135 (U-15), E-100 (U-17), E-254 and E-255 (U-23) E-272 (U-24), and E-227, E-228 (U-27), the owner or operator shall limit the VOC emissions to less than 5.0 tons per 12 consecutive month period. (A BACT determination is required to be performed for any future construction/modification subject to Regulation 7.25 for any emissions outside of the 5 tpy limit.)

- 2) **PM**
  - (a) In accordance with Regulation 6.09, Table 1, PM standard for Emission Point E-56 is 2.58 lb/hr for process throughput of 1,000 lb/hr or less. (The source submitted a one-time demonstration on February 21, 2014 that shows the potential uncontrolled PM emissions cannot exceed the PM emission standard.)
  - (b) In accordance with Regulation 7.08, Table 1, PM standard for Emission Point E-57 is 2.34 lb/hr for process throughput of 1,000 lb/hr or less. (The source submitted a one-time demonstration on February 21, 2014 that shows the potential uncontrolled PM emissions cannot exceed the PM emission standard.)
- 3) **Opacity**  
 Regulation 6.09, section 3.1 and Regulation 7.08, section 3.1.1 establishes opacity standards.

ii. **Standards/Operating Limits**

1) **VOC**

- (a) Regulation 6.24 limits the pound per hour and pound per day emissions of Class II and Class III solvents for Emission Points E-82 and E-84, unless the emissions are reduced by at least 85%. (The source submitted a one-time demonstration on February 21, 2014 that shows the potential VOC emissions cannot exceed the lb/hr emission standards from Regulation 6.24 for Class II solvents; and the lb/hr and lb.day for Class III solvents. Therefore, there are no monitoring, recordkeeping, or reporting requirements for these emission standards. But, the lb/day for Class II solvents can exceed when the process condensers are not operating as designed, therefore, the permit contains requirements for the time period when the process condensers are not operating as designed.)
- (b) Per Regulation 7.25 and construction permit 36563-13-C, Effective 4/26/2013, VOC emissions from Emission Points E-61a and E-61b (U-13), E-232 (U-14), E-135 (U-15), E-100 (U-17), E-254 and E-255 (U-23) E-272 (U-24), and E-227, E-228 (U-27), the owner or operator shall limit the VOC emissions to less than 5.0 tons per 12 consecutive month period. ii. **Standards/Operating Limits**

1) **VOC**

- (a) Regulation 7.12, section 3.3 requires submerged fill if the materials have an as stored vapor pressure of 1.5 psia or greater.
- (b) Regulation 7.12 applies due to the size of the tanks, however, since the vapor pressure as stored is less than 1.5 psia there are no applicable emission or equipment standards.
- (c) Per Regulation 7.25 (BACT) and construction permit 36563-13-C, Effective 4/26/2013, for Emission Point E-194, the owner or operator shall limit the VOC emissions to less than 1 ton per 12 consecutive month period.
- (d) Per Regulation 7.25 (BACT) and construction permit 36563-13-C, Effective 4/26/2013, for Emission Points E-188, E-189, E-190, E-192, E-193 (U-24); E-195, E-197, E-198, E-199, E-200, E-249, E-250, and E-251 (U-25), the owner or operator shall limit the VOC emissions to less than 1 ton per 12 consecutive month period.

2) **PM**

In accordance with Regulation 7.08, Table 1, PM standard for Emission Point E-194 is 3.59 lb/hr for process throughput of 2,000 lb/hr. (The source submitted a one-time demonstration on February 21, 2014 that shows the potential uncontrolled PM emissions cannot exceed the PM emission standard.)

3) **Opacity**

Regulation 7.08, section 3.1.1 establishes opacity standards.

u. **Emission Unit U-27 Solvent Wash**

i. **Equipment**

Emission Point	Description	Applicable Regulations
E-223	B03 Tank (Non Distillable Wash)	STAR, 7.12
E-224	B04 Tank (Distillable Wash)	
E-225	Filter Press 21 (Non Distillable Wash)	STAR, 7.25 (BACT)
E-226	Filter Press 22 (Distillable Wash)	
E-227	B05 Tank (Non Distillable Filtrate)	STAR, 7.25
E-228	B06 Tank (Distillable Filtrate)	

ii. **Standards/Operating Limits**

1) **VOC**

- (a) Regulation 7.12, section 3.3 requires submerged fill if the materials have an as stored vapor pressure of 1.5 psia or greater.
- (b) Regulation 7.12 applies due to the size of the tanks, however, since the vapor pressure as stored is less than 1.5 psia there are no applicable emission or equipment standards.

- (c) Per Regulation 7.25 (BACT) and construction permit 36563-13-C, Effective 4/26/2013, for Emission Points E-225 and E-226, the owner or operator shall limit the combined VOC emissions to less than 1 ton per 12 consecutive month period.
- (d) Per Regulation 7.25 and construction permit 36563-13-C, Effective 4/26/2013, VOC emissions from Emission Points E-61a and E-61b (U-13), E-232 (U-14), E-135 (U-15), E-100 (U-17), E-254 and E-255 (U-23) E-272 (U-24), and E-227, E-228 (U-27), the owner or operator shall limit the VOC emissions to less than 5.0 tons per 12 consecutive month period. (A BACT determination is required to be performed for any future construction/modification subject to Regulation 7.25 for any emissions outside of the 5 tpy limit.)

v. **Emission Unit U-28 Cooling Tower**

i. **Equipment**

Emission Point	Description	Applicable Regulations
E-269	Cooling Tower	7.08

ii. **Standards/Operating Limits**

1) **Opacity**

Regulation 7.08, section 3.1 establishes and opacity standard.

2) **PM**

In accordance with Regulation 7.08, Table 1, PM standard Emission Point E-269 is:

$$E = 3.59 \times (265.71)^{0.62} = 42.29 \text{ lb/hr}$$

(The source submitted a one-time demonstration on February 21, 2014 that shows the potential uncontrolled PM emissions for Emission Points E-269 cannot exceed the PM emission standard.)

**III. Other Requirements**

1. **Temporary Sources:** The source did not request to operate any temporary facilities.
2. **Short Term Activities:** The source did not report any short term activities.
3. **Emissions Trading:** N/A
4. **Operational Flexibility:** The source did not request any operational flexibility for the emission points.
5. **Compliance History:**

Incident Date	Regulations Violated	Result
8/9/2006	2.03.5.2 Failure to Comply with District Permit	Board Order
3/8/2011	2.16.5.2 Failure to Comply with Title V Permit	Board Order
6/7/2011	2.03.5.2 Failure to Comply with District Permit	Board Order
6/7/2011	2.03.1.2 Operating Equipment without a District Permit	Board Order
6/7/2011	2.16.5.2 Failure to Comply with Title V Permit	Board Order

6. **Calculation Methodology:**

The emission calculations for the various pieces of equipment associated with this permit are derived from stack test results, AP-42 emission factors, EPA’s Emission Inventory

Improvement Program, EPA guidance documents, mass balances and engineering judgments. Other calculation methodologies may be used after receiving written approval from the District. See Appendix A for specific emission factors and Appendix B for control device efficiencies.

a. **AP-42 Emission factors**

- Combustion emissions (Chapter 1.4-1, 1.4-2, 1.4-3, & 1.4-4 (small boilers))
- Solid material transfer emissions
  - Chapter 11.19; Crushed Stone Processing and Pulverized Mineral Processing
  - Chapter 11.24; Metallic Mineral Processing; Material Handling and Transfer - low moisture ore
- Liquid loading emissions
  - Chapter 5.2; Transportation And Marketing Of Petroleum Liquids
- Cooling Tower emissions
  - Chapter 13.4; Wet Cooling Towers
- Chapter 4.7; Waste Solvent Reclamation

b. **TANKS 4.09D**

Breathing and working losses for all storage and process tanks are estimated by using the computer software program to estimate volatile organic compound emissions.

c. **EIIP Volume II, Chapter 8**

Emission Inventory Improvement (EIIP) documents describe procedures and recommended approaches for estimating emissions. Chapter 8 is for "Paint, Ink, and Other Coating Manufacturing", but the techniques can be applied to other evaporation sources.

- Emission Model for Material Loading (Equation 8.4-1)
- Emission Model for Surface Evaporation (Equation 8.4-22)
- Emission Model for Sweep of Purge (Equation 8.4-32)

d. **EPA's OAQPS Guideline Series**

One in a series of reports which provide guidance on air pollution control techniques for limiting emissions of VOC from sources. In this case it was used to model emissions from the Stills (U-17).

- Control of Volatile Organic Emissions from Manufacture of Synthesized Pharmaceutical Products", Document EPA-450/2-78-029, Appendix B, Equation 15.

e. **Stack testing**

Eckart has stack tested numerous emission points to determine PM and VOC emission rates. When other equipment is of a similar type, the emission rate is prorated based upon the equipment capacities. Emissions are calculated by multiplying these rates by the hours of operation of the equipment, and accounting for any control device efficiency.

f. **Engineering judgment**

Emission factors for the Filling Stations in Unit U-4 are engineering estimates from the Reynolds Metal Company June 29, 1995 Bin Fill Construction Permit Application. Since 1995, this plant has been purchased and is operated by Eckart Americas Corporation.

**7. Insignificant Activities:**

Equipment	Qty	PTE(tpy)	Reg. Basis
Direct Heat Exchangers (U-1, U-2)	4	1.20 (NOx) total	Regulation 1.02
Air Slide Conveyor Pod (U-3)	1	4.32 (PM)	Regulation 1.02
Docking/Transfer Station (U-3)	1	0.71 (PM)	Regulation 1.02
Pressurized VOC Storage Vessels	6	0	Regulation 1.02, Appendix A
Research and Development Activities	6	2.82 (VOC) total	Regulation 1.02, Appendix A
VOC Storage Vessels with Maximum Capacity of 250 Gallons or Less	24	1.24 (VOC) total	Regulation 1.02, Appendix A
Above Ground Fuel Oil Storage Tanks	1	0.09 (VOC)	Regulation 1.02, Appendix A
Cold solvent parts cleaners that are equipped with a secondary reservoir	2	0.04 (VOC) total	Regulation 1.02, Appendix A
Blending & Repack (U-7)	6	0.1 (PM) each	Regulation 1.02
Miscellaneous Tanks (U-13, U-17, U-24, U-25)	8	0.25 (VOC) total	Regulation 1.02
Centrifuge & Rework Hopper (U-22)	2	0.85 (VOC) total	Regulation 1.02
R&D Mixer (U-24)	1	0.21 (VOC)	Regulation 1.02

- 1) Insignificant Activities identified in District Regulation 1.02, Appendix A may be subject to size or production rate disclosure requirements.
- 2) Insignificant Activities identified in District Regulation 1.02, Appendix A shall comply with generally applicable requirements.
- 3) Activities identified in Regulation 1.02, Appendix A, may not require a permit and may be insignificant with regard to application disclosure requirements but may still have generally applicable requirements that continue to apply to the source and must be included in the permit.
- 4) Emissions from Insignificant Activities shall be reported in conjunction with the reporting of annual emissions of the facility as required by the District.
- 5) In lieu of recording annual throughputs and calculating actual annual emissions, the owner or operator may elect to report the pollutant Potential To Emit (PTE) quantity listed in the Insignificant Activities table, as the annual emission for each piece of equipment.
- 6) The Insignificant Activities Table is correct as of the date the permit was proposed for review by U.S. EPA, Region 4.
- 7) The owner or operator shall submit an updated list of Insignificant Activities whenever changes in equipment located at the facility occur that cause changes to the plant wide emissions.

**8. IA Emission Units with Applicable Regulations****a. Emission Unit IA-EG****i. Equipment**

Emission Point	Description	Applicable Regulation
IA -EG	Emergency diesel generators that installed after July 11, 2005 and manufactured after April 1, 2006, with a maximum engine power less than or equal to 500 HP and located at an area source of HAP.	40 CFR 63, Subpart ZZZZ, 40 CFR 60, Subpart IIII

ii. **Standards/Operating Limits**

1) **Unit Operation**

(a) 40 CFR 60.4202 and 4205 establish emission standards for the owner or operator or manufacturer of the emergency stationary CI ICE.

(b) 40 CFR 60.4211 establishes unit operation requirements for emergency stationary CI ICE.

2) **Fuel requirements**

40 CFR 60.4207 establishes requirement for nonroad diesel fuel.

iii. **Monitoring and Record Keeping**

1) **Unit Operation**

40 CFR 60.4209(a) and 4214(b) establish monitoring and record keeping requirements for emergency stationary CI ICE.

iv. **Reporting**

1) **Unit Operation**

40 CFR 60.4214 establish reporting requirements for emergency stationary CI ICE.

**9. Appendix A – Emission Factors and Calculation Methodologies**

Emissions are calculated by multiplying the throughput (ton, MMCF, etc.) or hours of operation of the equipment by the appropriate emission factor and by 1 minus any control device’s efficiency.

		(Second Stage)	26 °F - 30 °F	89%	
		(Only One Stage Operations)	30 °F - 35 °F	75%	
		(No Stage Operation)	> 35 °F	0%	

Note:

1. Options for control efficiency determination:
  - Option 1: Use District pre-approved control efficiency
  - Option 2: Submit a signature guarantee from the control device manufacture stating the control device efficiency
  - Option 3: Perform stack test. See Plant-wide Specific Conditions S4.a. for general testing requirements.
  
2. Until the District receives a signature guarantee from the control device manufacturer stating the control device efficiency is higher (Option 2), or an approved stack test (Option 3), the pre-approved efficiency (Option 1) will be used in all calculations to demonstrate compliance with applicable standards and calculations for emission inventory.
