SECTION 5 Exemptions from the Definition of Toxic Air Contaminant

As used in these regulations, the following substances shall not be considered to be a toxic air contaminant:

- 5.1 Any substance for which there is a national ambient air quality standard, but only to the extent that a particular substance is treated in a generic fashion, for example, as particulate matter or a volatile organic compound,
- 5.2 Carbon dioxide,
- 5.3 Ethane,
- 5.4 Grain dust,
- 5.5 Helium,
- 5.6 Hydrofluorocarbons,
- 5.7 Hydrogen,

SECTION 6 Implementation Guidance

- 6.1 If a TAC is a compound that is included in a listed compound group, for example, a metal compound group, and a benchmark ambient concentration (BAC) is derived for the compound group, then that BAC shall be the default BAC for a compound in that group unless a BAC for the specific compound is derived pursuant to the methodology in Regulation 5.20.
- 6.2 If a TAC is a compound that is included in two listed compound groups, then environmental acceptability shall be demonstrated based upon the more stringent BAC. If the two compound groups applicable to that TAC are listed in different TAC categories, then the requirements of the lower numbered category (Category 2 is a lower numbered category than Category 3) shall apply.
- 6.3 The owner or operator of a process or process equipment that has the potential to emit chromium or a chromium compound may, using information that is derived using one of the methods in Regulation 1.06 *Stationary Source Self Monitoring, Emissions Inventory Development, and Reporting* section 3.2, speciate the chromium emissions by oxidation state. If the chromium is not speciated by oxidation state, then the hexavalent oxidation state shall be assumed.
