Treatment Program***

**OFFICE OF
ADDICTION SERVICES**
A service of Public Health and Wellness

We provide treatment for those who struggle with addiction to drugs like heroin, hydrocodone, oxycodone, and other similar drugs.

What we do...

- *We treat you with dignity and respect*
- *We tailor your treatment to meet your individual needs*
- *We help you access outside services that support your recovery, from finding a mental health provider (if needed), to finding a local support group, and more.*

The MORE Center treats opioid use disorders (addiction) with a combination of psychosocial counseling and medication. Our Medical Director and nursing staff will assist you in finding a safe, stabilizing, daily dose of methadone that allows you to avoid withdrawal symptoms, so you can begin rebuilding your life. Yes, change is possible, and we want to help you break the cycle of addiction.

All of our counseling staff are certified alcohol and drug counselors, specializing in medication assisted treatment. Many of our staff are licensed, as well. We strive to provide you with an excellent counseling staff, and some of the best treatment in the region.

More about methadone, and medication assisted treatment

Methadone has been the gold standard for treatment of opiate addiction for decades. Research showing its effectiveness has been established for over forty years. Women who are pregnant and addicted to opiates, are frequently referred to medication assisted treatment, for improved health of their baby during pregnancy.

Medication assisted treatment has changed a lot over the past several decades. It is common now to be prescribed a lower dose - a dose that's enough to stabilize, yet avoids the unpleasant side effects of drowsiness that can occur with higher doses.

We believe...

recovery from addiction is possible for

everyone.

Our mission is to provide high-quality, evidence-based treatment services to those who struggle with addiction to opioids.
